REC Release 2.7

Version 2.7.2 Released 14ᵗʰ September 2011.

Minor Release

This version is a minor release containing a relatively small number of changes:

- **Batch Products Processor**. Added "Exclude from Google products" to Batch Products Processor so you can now exclude ranges of products from the Google feed if required.
- **Order/Invoice Discount Column**. In Order Manager, the Order/Invoice now hides the discount column if no discounts have been applied via coupons. This is helpful as it stops customers enquiring after discounts when they see a blank discount column.
- **Purchase Order Emails.** When you email a copy of a Purchase Order to a manufacturer it now also sends a copy to all site admins as proof the email was sent.
- **Purchase Order Number.** Added the ability to enter your Purchase Order number to order records which can then be printed on the actual Purchase Order.
- **Purchase Order Manufacturer.** Added the ability to print the manufacturer 's name to a Purchase Order using the tag {manufacturer:name}
